

NLB Banka ad Skopje

Hold

Initiation of coverage

Price: MKD 18,150 Price target: MKD 20,807

Branded exposure to an underbanked economy

We initiate coverage of NLB Banka ad Skopje with a HOLD rating and a price target (PT) of MKD 20,807/share, which offers upside of c.14.6% to the 8 December closing price. We appreciate the bank's capital, which should allow it to record growth rates similar to the market on both the assets and liability sides, together with its liquidity at market levels. The growth trajectory should more than offset the downward pressure on the NIMs and, as the bank enters the new asset quality cycle, with quite a low NPL ratio and good coverage, we project an improving COR from next year onwards, which is likely to drive profitability in future periods. The presence of a large regional and strategic investor gives some assurance in terms of NLB Banka's capital and dividend payments going forward, in our view. At 1.0x and 0.9x our P/BV for 2021E and 2022E, respectively, and following the rise in the share price over the past couple of years, we believe the shares have mostly run out of upside potential; thus, we recommend to HOLD the shares now.

Growth potential. The bank's liquidity ratios are at market levels currently, and the local central bank expects the banking sector itself to grow faster than its peer countries in the following years. In a concentrated market such as North Macedonia, we expect the largest banks to obtain a major share of the market's growth, which could result in minor market share gains. For NLB Banka, we model a gross loan book CAGR of 7.1%, which could steer the bank's market shares towards its strategic levels: i) 16% in the corporate segment; and ii) 23% in the retail segment. We believe the bank's current capital levels offer enough capacity for such high growth rate estimates.

COR, asset quality and profitability going forward. NLB Banka entered the current crisis with good asset quality. After years of declines, the NPL ratio was reported at 4.3% in 2019, while the NPL coverage declined to 67.7%. By 3Q20, the NPL ratio increased back to 4.6%. Still, the loan COR is likely to drive the profitability levels in the next couple of years and we expect it to decline in 2021E to 0.9% vs. the 1.2% we expect to be reported in 2020E. In 2022E, the COR could drop to 0.7%. In any case, the declining COR should drive a rebound in profitability; thus, we expect the ROE to reach 11.5% in 2021E and as much as 12.3% in 2022E. Currently, we calculate that the long-term ROE could reach 12.8%.

Strategic investor and dividends. Given its dividend history, NLB Banka can be considered a dividend name. While management chose not to pay dividends from the 2019 profit this year, we believe the dividend payments could return soon for multiple reasons, including: i) NLB Banka's capacity to do so, even despite the high growth rates of the loans expected; ii) the reasonable capital levels, especially following the cancelled dividend payment this year; and iii) the presence of a large, strategic investor under the name of NLB Group. We anticipate dividend yields of 4.2% and 5.5% in 2021E and 2022E, respectively, but we admit that we may be slightly too conservative on our modelled payout ratios of 50% across our forecast period.

Valuation. In our view, the current share price more or less reflects the bank's fundamental value. At c.1x P/BV on a sustainable ROE of c.12-13% and a COE of 11.6%, we see the current levels as fair. Our excess return and three-stage DDM valuation models suggest blended upside of c.14.6%, which further supports our view and our HOLD recommendation on the name.

Investment case

We initiate on NLB Banka ad Skopje with a HOLD rating and a price target (PT) of MKD 20,807/share. We appreciate the bank's position on the local market, which could help it gain market share as it could enjoy slightly higher growth rates than the market. Such loan growth could, in our view, be supportive in the context of the falling interest rates environment and could thus keep the NIMs above 3% in our forecast period. At the same time, we appreciate the solid capital levels, as well as the presence of a strategic investor, which is a strong regional player. We expect the bank's profitability to remain strong and the ROEs to return to levels above 12% by the end of 2022E, mostly on the back of an improving COR, the aforementioned NIM levels, as well as C/I ratios below 42% during our forecast period. We note that the FX risks on both the balance sheet, as well as in the economy, are persisting, but the bank is offsetting its exposure. Given the current market valuation of 1x and 0.9x P/BV on our 2021E and 2022E estimates, respectively, growth rates near market levels and implied upside of c.14.6%, we are HOLDers of NLB Banka's shares currently.

The bank's loan growth potential remains strong due to the liquidity at market levels and the good capital levels. North Macedonia's economy remains underbanked, and it seems quite oligopolistic, in our view. Considered the second- or third-largest bank in the country, NLB Banka's position is relatively strong. For further details, please see our banking sector overview. According to our understanding, the bank plans to increase its market share in both corporate, as well as retail, lending to 16% from 14% currently, and to 23% from 21%, respectively. While it is unlikely that the bank will grow considerably faster than the market, we believe the oligopolistic structure of the sector allows the larger banks to gain market share. Assuming the structure of the sector's loan book remains the same, we forecast NLB Banka's market share in retail loans to converge to the bank's target and reach 22.3% by 2022E; while, in the corporate segment, we anticipate NLB Banka's market share to reach 15% by 2022E. We expect the net loan book to record a CAGR of c.7.1% between 2019 and 2022E.

Strong loan growth will support the NIMs and will slow down their decline. While we see a certain decline in the NIMs going forward, we believe the rate of the decline could slow down in 2022E vs. 2021E. On our numbers, the bank's NIM could drop to 3.2% in 2020E from 3.5% in 2019. From then on, we pencil in the NIM to decline to 3.08% and 3.02% in 2021E and 2022E, respectively. Despite the declining NIMs, we expect the net interest income to show a CAGR of 2.9% between 2019 and 2022E, mostly on the back of the aforementioned strong growth of the bank's loan book.

Strategic investor and sufficiently high capital should support dividend payments, in our view. NLB Banka ad Skopje has been a high dividend payer historically. Due to the pandemic caused by the coronavirus, the bank's management decided to postpone its recommendation on the dividend from the 2019 profit. However, we believe the bank could return to regular dividend payments as soon as next year and we expect, on average, payouts of 50% in the mid-term. We calculate that the long-term sustainable dividend payout ratio could be around 77%. In our view, the high capital ratios and the strategic investor behind the bank offer a cushion of safety, and even higher payouts could be possible, despite the aforementioned growth of the loan book, due mostly to the increasing capital in our model.

We see the bank returning to high profitability soon. On the back of multiple factors, including cost-to-income ratios near or below 40% in the years prior to 2019, quite high NIMs, as well as a relatively good COR performance, profitability has been very high recently. The pandemic did put pressure on NLB Banka's profitability earlier this year, due to which we expect the ROE metric to remain somewhat subdued, at c.10%. However, we believe the bank could return to ROEs near 12% by 2021E, where we expect it to remain for the foreseeable future. We do not pencil in any dividend payment from the 2019 profit, which inherently influences our ROE estimate. Should the bank decide to pay the dividend later on, even in the form of a special dividend, we believe the mid- to long-term ROEs could reach levels around 14%. In terms of C/I, we pencil in a gradual decline to 39.6% by 2022E, with the total operating expenses CAGR at 1.5% between 2019 and 2022E.

Due to the high euronisation of the economy, the bank's balance sheet remains exposed to FX risks. The sector's aggregate loan book consists of c.40% of loans in foreign currency. As of end-2019, the bank's FX loan book accounted for 42.5% of the total. Both the sector's and the bank's exposure to foreign currencies have been dropping gradually recently. The developments on the liability side of the balance sheet are similar. Despite the declining trends, we believe this is likely to remain a long-term issue; thus, it is a theme to watch, in our view. On the other hand, the bank manages its net exposure quite well. Its net USD exposure (loans vs deposits) has not reached more than 4% of total assets in the past three years, while its net EUR exposure has been lower than 3% of total assets in the same period.

We believe the current share price reflects the fundamentals. The current P/BV ratios of 1.0x and 0.9x our 2021E and 2022E (1.2x and 1.1x on our PT), respectively, reflects the fundamentals, in our view; and, with sustainable ROEs between 12-13% in the mid-term and the COE at 11.6%, we see the current market valuation as fair. Thus, we believe our HOLD recommendation is justified currently.

Valuation

We set our price target (PT) for NLB Banka ad Skopje at MKD 21,807/share, offering upside of c.14.6% to the closing price on 8 December. We arrive at our PT using a combination of our excess return valuation model, giving us a PT of MKD 21,489/share, and our three-stage DDM, which yields a PT of MKD 20,124/share. The difference between the two methods is 7%.

NLB Banka ad Skopje: valuation summary

TNB MS Equity	
Excess return valuation (50%)	21,489
3-stage DDM (50%)	20,124
Weighted average PT	20,807
Current price	18,150
Potential upside	14.6%

To calculate the fair value of NLB Banka's shares, we sum up the present value of excess returns per share until 2027E, the present value of the excess return in the terminal period beyond 2027E and the current capital invested in the bank at the implied P/BV ratio of 1.14x (P/BV = (LT ROE – g)/(COE – g)), based on a long-term ROE of 12.8%, a COE of 11.6% and a long-term growth rate of 3%. The fair value of an individual share then lands at MKD 19,256, giving us a 12M PT of MKD 21,489/share. The sensitivity of our excess return model for NLB Banka to the cost of equity and long-term growth rate estimates is presented below.

Dividend discount model

In our dividend discount model, we assume a 50% payout ratio from the 2020E earnings, which continues, more or less, for the following four years. In the second stage of our model, we assume that the payouts could increase gradually, to 77%, which we calculate as a sustainable level of payouts in the long term. The lower payout ratios in the early stages of our model are the result of the pandemic-caused crisis and our rather conservative stance towards dividends in the first years after the pandemic has run its course.

NLB Banka ad Skopje: three-stage dividend discount valuation model

To calculate our price target, we sum up the present value of the dividend cash flow received by investors in the first stage of our model (2020-22E), the present value of the dividends in the second stage (2023-27E) and the book value of the equity in the terminal value multiplied by the implied P/BV of 1.14x. Putting two and two together, we arrive at a fair value MKD 18,032/share, or a 12M PT of MKD 20,124/share. Below, we present the sensitivity analysis of our dividend discount model to the cost of equity estimate and the long-term growth rate, which we assume at 3%.

NLB Banka ad Skopje: sensitivity of our dividend discount model

		Long-term growth rate										
		2.0%	2.5%	3.0%	3.5%	4.0%						
	9.6%	26,899	27,029	27,160	27,291	27,422

Peer comparison and multiples valuation

Our HOLD recommendation is supported further by the multiples at which the bank currently trades. We note that, due to the lack of Bloomberg consensus, we decided to use historical data for the two charts below. While these numbers may not be as indicative as forward-looking numbers, we believe they can give us an insight on the trends. As NLB Banka trades at a high P/BV multiple, coupled with a large premium vs. its peers, we believe our decision to put the bank on HOLD for now is justified. On forward-looking multiples, the bank trades at 1.0x and 0.9x our 2021E and 2022E book value estimates, respectively.

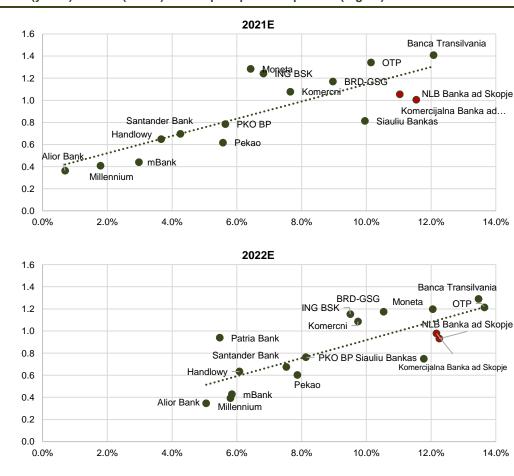

NLB Banka ad Skopje: price to historical BV and discount to peers (frontier)

Source: WOOD Research, Bloomberg

As the two plots below indicate, NLB Banka's ROEs are superior to those of its peers trading at similar forward looking P/BV multiples. Some premium for NLB Banka is justified, in our view, not only because of its higher ROEs, but also due to the superior growth rates anticipated for the banking sector in North Macedonia vs. its peer countries in the region.

P/BV (y-axis) vs ROE (x-axis) scatter plot: peer comparison (region)

Source: WOOD Research, Bloomberg

NLB Banka ad Skopje trades currently at c.1.0x and 0.9x our book value estimates for 2021E and 2022E, respectively, slightly lower than our estimates for the bank's peers. This is coupled with potential ROEs above 10% in the next two years, only slightly higher than the frontier peer average. On P/E, the bank trades at 10.6x and 9.3x, on our 2021E and 2022E numbers, respectively.

Risks

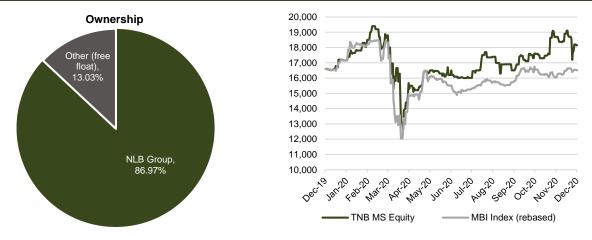

- ✓ Political risks. The country changed its name to North Macedonia recently, to be able to join NATO and apply to join the European Union. While Mr. Zaev, who was the Prime Minister during the name change, is usually seen as a statesman abroad, his decision to change the country's name, due to a long-standing dispute with neighbouring Greece, angered some of his voters, which resulted in snap elections, which took place earlier this year. During his tenure, the quality of democracy improved somewhat, according to the ratings by Freedom House, but it still scores only 63/100 points and is considered to be a "Partly Free" country.
- ✓ COVID-19. North Macedonia has not been spared from the COVID-19 pandemic. The government introduced certain measures, and announced a state of emergency between 18 March and 22 June. Following quite an easy summer, the number of COVID-19 cases began increasing again in the autumn. Should the government fail to contain the outbreak, there are risks that the negative impact of the pandemic will be larger than expected initially, which could, consequently, influence our estimates. The winter months are likely to be key in containing the spread of the disease in the country and elsewhere.
- ✓ **High unemployment rate and other economic factors.** High unemployment remains a large problem in North Macedonia, especially amongst the younger generation, which faces an unemployment rate of c.34.9%, according to the State Statistical Office of North Macedonia. A large number of North Macedonians are thus moving abroad, seeking jobs, which has negative effects on the local economy. The overall unemployment rate declined to 17.3% in 2019, from 26.1% in 2015. If the outflux of the local population increases, the economic potential of the country will fall, which could affect our long-term estimates and assumptions negatively. With the crisis triggered by the COVID-19 pandemic, the odds of this may have increased slightly.
- ✓ High rate of Euronisation of the local banking system and economy. The local population is still demanding the EUR, and transacts with the currency quite frequently. FX loans and FX deposits account for more than 40% of their respective totals. Despite the evident downward trend, the demand for foreign loans from North Macedonia remains elevated. On the one hand, this is positive, as the local banking sector may easily offset the large amount of FX deposits it carries on the aggregate balance sheet, but it also creates an inherent risk, especially if the central bank decides to leave its effectively fixed exchange rate policy, or if the factors influencing the exchange rate become too strong for the central bank to handle. While we do not see these risks as imminent, they are present and, should they increase, such levels of Euronisation may prove to be dangerous. Please see our overview of the banking sector in North Macedonia, for further details.
- ✓ Trading turnover and free float are relatively low. In USD terms, NLB Banka ad Skopje's 3M ADTV remains only c.USD 100,000. While this may be the result of the high stake held by NLB Group, which in and out of itself does not really pose a risk, the low share turnover does indeed increase the overall risk of the investment, should a higher stake be acquired. On the other hand, we note that the free float of the company's shares is quite large.

Company description – briefly on NLB Banka ad Skopje

NLB Banka ad Skopje is one of the leading banks in the country of North Macedonia, the third-largest bank in terms of assets and the second-largest in terms of loans. The bank operates 52 banking branches currently, it is one of the strongest institutions in the card business in the country. NLB Group, with an 86.97% equity stake, is the only shareholder of the bank that holds more than 5%. The rest of the shares outstanding are considered free float.

The bank was established in 1985 and, since 1993, it has been operating as a commercial bank, offering its services to clients in North Macedonia. The majority of the bank's capital was acquired by NLB Group (Nova Ljubljanska Banka d.d. Ljubljana) in 2000, when NLB Banka ad Skopje became one of the group's first members.

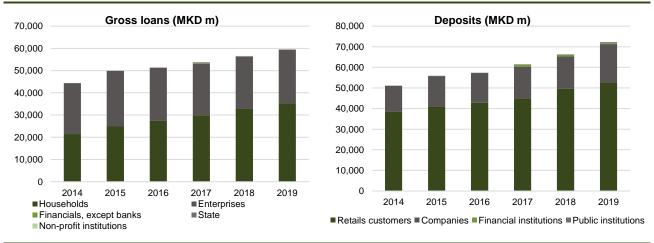

NLB Banka ad Skopje: shareholders' data and share price performance

Source: WOOD Research, NLB Banka ad Skopje

As of 30 September 2020, the bank has offered universal banking services, but it is most active in retail lending, which accounts for c.61% of its total gross loans. While the bank offers many types of loans, including credit card loans, consumer loans and mortgages are its focus areas currently. Its corporate lending arm is quite large as well, with its share of total lending taking up as much as 40%; however, the share of loans to corporates has dropped gradually to the current levels, from c.51% in 2014. The deposit structure is similar, with the exception that retail deposits account for a larger part (73%) than in loans. In terms of the structure of the bank's balance sheet, deposits finance as much as 80.2% of total assets, 77.8% of which are net loans.

He has also held other senior positions in the field of finance in Slovakia and Austria. He earned a MBA degree from the Donau University (Austria) in cooperation with University of British Columbia (Canada) and was awarded a Masters in Advanced Studies in Finance from Donau University. He also holds a Masters from the Vienna University of Economics and Business in Social and Economic Sciences.

Peter Zelen, Member of the Management Board. Mr. Zelen has worked in the field of finance and banking for more than 22 years. Prior to joining NLB Skopje in 2020, he worked for NLB Group since 2010 as a manager for restructuring, a manager for credit analysis, and he also served as the head of the department for credit analysis and various other positions. He earned a BSc in Economics at the Economic Faculty of the University of Maribor in 2001 and a BSc in Engineering at the University of Ljubljana.

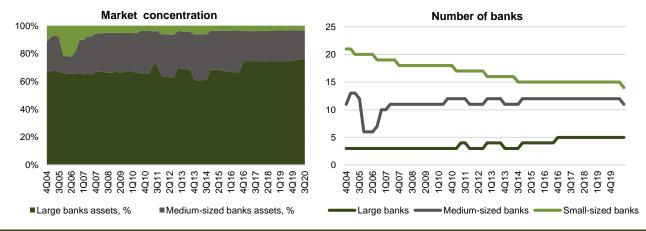

Igor Davchevski, Member of the Management Board. Mr. Davchevski has more than 20 years of experience in the field of banking and finance. He joined NLB Skopje in 2002 and, until 2010, he served as a Senior Executive for Self-Service Banking; then, until 2019, he served as the Manager for the Payment System Division. Between 2018 and 2019, he serves as an Assistant to the Management Board (COO) and, since 2020, he has been a Member of the Management Board and serves as the COO. Prior to NLB Skopje, he worked at International Private Bank. He holds a BSc in Electronics and Telecommunications from the Cyril and Methodius University in Skopje. In 2019, he earned his MBA at the IEDC Bled School of Management in Slovenia. Between 2014 and 2019, Mr. Davchevski was a Member of the Management Board of Clearing House KIBS ad Skopje.

North Macedonia's growth case - a brief reminder

In this section, we touch briefly on the growth case of the banking industry in North Macedonia. Most of the banks, the largest of them at least, should be able to draw large benefits from the growth that we anticipate going forward. For a more detailed description of the banking industry in North Macedonia, please refer to our report, page 18.

North Macedonia's banking system is highly concentrated amongst the five largest banks. The three largest banks, in terms of assets, hold a market share of c.57%; while the top-five banks hold a market share of 75%. There are 14 banks operating in the country currently, three of which are considered to be large, six medium-sized and five are small. On 12 August 2020, the local central bank revoked the operating licence of Eurostandard Banka ad Skopje.

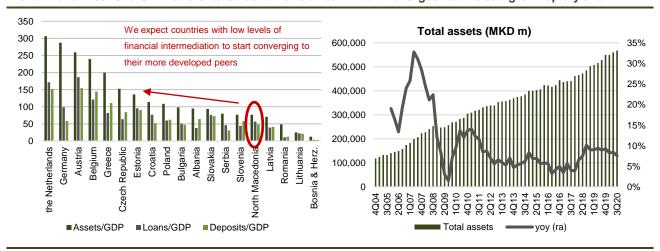

Source: WOOD Research, National Bank of the Republic of North Macedonia

The level of financial intermediation, measured as bank assets to GDP, loans to GDP and the total amount of deposits to GDP remain quite low in North Macedonia, at least when compared to its more developed peer countries. While it remains close to the levels of North Macedonia's peer countries, the increase of financial intermediation should go hand-in-hand with the economic development of the country, supporting the further growth of the sector's asset base. As is clear in the chart below, the industry has been reporting superior growth rates vs. its peer countries already in the past, and we expect this to continue.

...and the low loans to GDP ratio created conditions under which the largest banks can grow rapidly and ...

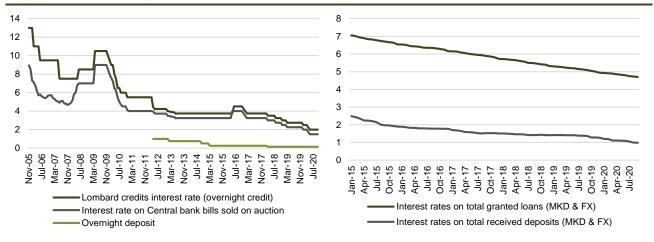

Source: WOOD Research, National Bank of the Republic of North Macedonia, central banks of all the respective countries, statistical offices of the respective countries, CEIC

Currently, the local central bank expects credit to grow by 6% in 2021E; while deposits are expected to grow 6.5%. In 2022E, the growth of credit increases further, to 7%, and we expect deposits to grow faster too, to 7.7%.

Both the concentrated banking market and the lower levels of financial intermediation should create such conditions in the market, which could play out well for the largest players in the country. With the market power they hold currently, they should be able to attract most of the growth and thus beat the average growth rates of the smaller players.

In our view, this could help local banks to tackle the environment of declining interest rates going forward. The average interest rates on total granted loans and received deposits followed the downward path of the central bank rates and, most importantly, of the interest rate on Central Bank bills sold at auction, the key rate of the central bank currently.

...fight the ever-declining interest rate environment

Financial forecasts

Assets, loans and deposits

In the chapter above, we lay out our growth case for North Macedonia's banking sector. We believe this should translate into growth of the loan books and asset bases across the board but, in our view, the largest banks could obtain a significant part of the growth. This is the reason we expect NLB Banka to record a gross loan book CAGR of 7.1%, somewhat higher than what the local central bank expects for the sector.

NLB Banka ad Skopje: loans and deposit forecast

Source: WOOD Research, NLB Banka ad Skopje, National Bank of the Republic of North Macedonia

Under the assumption that the structure of the sector's loans will remain unchanged, we project the bank's market share in retail loans to converge to the strategic level set by the bank and reach 22.3% by 2022E; while, in the corporate segment, we expect NLB Banka's market share to reach 15% by 2022E.

In terms of deposits, we believe the inflow should remain strong. In 2020E, the expected deposit growth is explained by the closure of the economy earlier in the year, and clients' inability to spend or travel (so the liquidity is kept in their deposit accounts). The slight slowdown and consequent increase in 2021E and 2022E, respectively, are in line with the central bank's forecasts, or a touch higher. We expect deposits to grow 8.2%, 7.7% and 8.0% in 2020E, 2021E and 2022E, respectively. The resulting net L/D ratio lands between 74.4% and 76.1% between 2020E and 2022E.

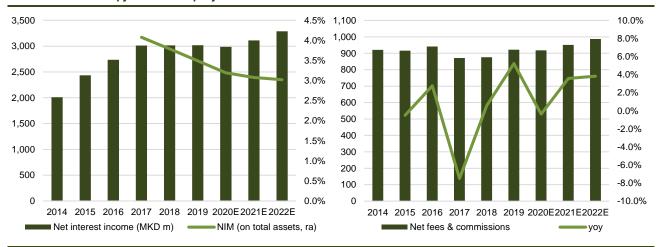

Net interest income, F&C and total operating revenues

Similarly to other banks in the region, NLB Banka ad Skopje has muddled through the low interest rate environment and we anticipate this to continue, at least throughout our forecast period. On the back of the recent declines in the ECB's and North Macedonia's central bank's key interest rates, we expect further declines in NLB Banka's yields in the coming years. In our view, this should be offset by the increase in the loan book, as described above.

Having said that, we pencil in a slight decline in the net interest income (NII) in 2020E vs. 2019; while, in 2021E, we expect the NII to grow 4.1%, followed by growth of 5.6% in 2022E. The increasing growth rates in NII are the result of the increase in the net loan book over the forecast period. In terms of NIMs (calculated on total average assets), we anticipated further declines in line with what we have seen

previously. In 2022E, on our numbers, the decline in NIM could ease somewhat. In our model, we calculate a NIM of 3.2% in 2020E, down from 3.5% in 2019, and 3.1% and 3.0% in 2021E and 2022E, respectively.

NLB Banka ad Skopje: WOOD's projections of net interest income and NIMs

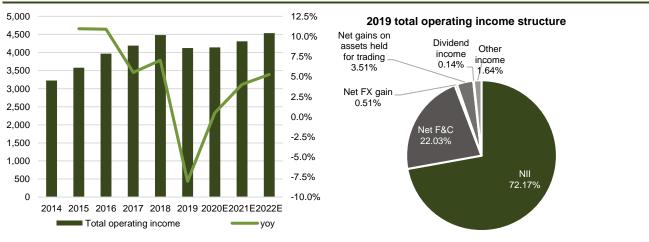

Source: WOOD Research, NLB Banka ad Skopje; ra - right axis

Banks in North Macedonia have forgone multiple fees during the state of emergency in the country. Due to this, we model a weaker F&C line for 2020E, specifically a decline of 0.4% on an annual basis. However, going forward, we feel comfortable modelling growth rates that converge gradually towards 4%, mostly on the back of increased economic activity, as well as an increasing number of banking clients, as the economy returns to normal slowly over the years.

All of the above, coupled with net other income, takes our total operating revenue to MKD 4,143m in 2020E, MKD 4,309m in 2021E and MKD 4,536m in 2022E.

NLB Banka ad Skopje: total operating income estimates

Source: WOOD Research, NLB Banka ad Skopje

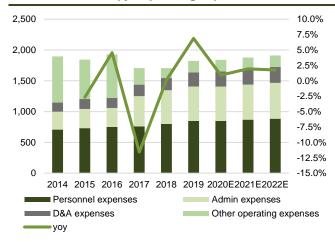

Operating costs

In our view, operating expenses are likely to continue with the trends we have seen in the past couple of years, i.e., slight increases over time. With such a high unemployment rate in the country, we believe the upward salary pressure should not be too high, even though we admit that, with a high number of competent people moving abroad, the pressure may be slightly higher in the banking industry than in the rest of the economy. However, we pencil in a more or less flat number of personnel over our forecast period and, thus, we expect the bank's personnel expenses to record a CAGR of c.2% over our forecast period.

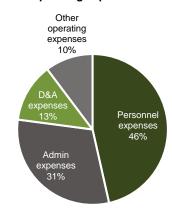

We model the other costs lines to also continue with their trends, increasing slightly between 2019-22E. On average, we anticipate general and administrative expenses to grow 1.3% over this period, while D&A expenses could account for c.12% of property and equipment, in our view.

As a result, total operating expenses could record a CAGR of 1.5% between 2019-22E, in our view, while the C/I ratio is likely to remain between 42% and 39%.

Asset quality and cost of risk

In terms of NPLs, the asset quality at NLB Banka ad Skopje has improved recently, to approximately 4.3% in 2019 from c.8% in 2014. While we admit that the coverage of NPLs declined somewhat over the period, we also note quite a substantial increase in the coverage of C, D and E category loans (please see the subchapter below for more details on C, D & E category loans). Having said that, we anticipate the asset quality to deteriorate over the next couple of years, as we learn the true impact of the current crisis – the increase in unemployment, the number of defaults, and the decline in business activity, etc.

This is also reflected in our COR forecasts. We expect the loan COR for 2020E to land at 1.2%. It is likely, in our view, that some uncertainty will continue into the first cold months of next year; thus, we expect the annual loan COR for 2021E to decline to 0.9%. In 2022E, we expect the COR to start converging to more "reasonable" levels, near 0.7% Total provisions of financial assets could, in our view, reach as much MKD 854m this year, coming down MKD 527m in 20201E and to MKD 441m in 2020E.

The total COR, i.e., the total impairment charge over the total financial asset exposure (including loans, securities, etc.), is likely to increase from 0.6% in 2018 and 0.1% in 2019 to 1.0% in 2020E, and then decline slightly, to 0.6%, in 2021E. On the back of the gradual declines in the loan COR, which accounts for the largest part of the total provisioning activity, the total COR could decline again to 0.4%.

C, D & E loans explained

This report is based on the IFRS numbers reported by the bank. However, in terms of asset quality, we have decided to present and discuss the C, D, & E category loans. These categories are based on the local GAAP and, while the methodology is based, to a certain extent, on IFRS, it does not cover all the provisions and details applicable for IFRS 9.

The main difference versus IFRS 9 stems from the NBRNM-defined classification of credit risk exposure into the five categories presented in the table below, with pre-defined levels of impairment, e.g., in risk category A, percentages (potential losses) are limited from 0.01% to 5.00%. The three different groups then work similarly to Stages 1-3 under IFRS:

- ✓ Group 1 includes credit risk exposure classified as risk category "A".
- ✓ Group 2 includes all the credit risk exposure classified as risk categories "B" and "C", and still bears the performing credit exposure status.
- Group 3 includes credit risk exposures with non-performing status, exposures classified under the risk category "D" and "E", as well as a part of risk category "C", with non-performing status.

Risk categories under the NBRNM reporting standards

Risk Category	Percentage
A	0.01% - 5.00%
В	5.01% - 20.00%
C	20.01% - 45.00%
D	45.01% - 70.00%
E	70.01% - 100.00%

Source: WOOD Research, NLB Banka ad Skopje

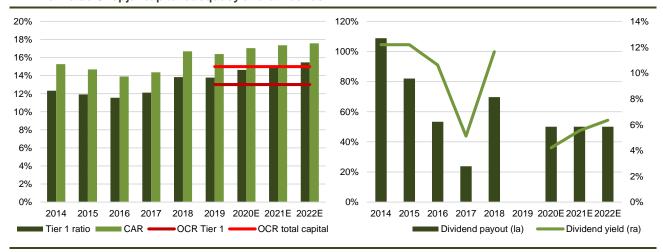

As per IFRS 9, the expected losses percentage is calculated using a model. As the local regulations define the aforementioned limits for each risk category from A through E, the input parameters for the calculation of impairments are set differently under the local GAAP. The resulting value thus gives, most of the time, a higher value and percentage for impairments.

Capital and dividend projections

While NLB Banka may seem to be quite tight in terms of capital when glanced at from the FY19 perspective (Tier I = 13.8% vs. the 13% required, including all the buffers), we do not expect any major issues. First, the bank has not paid a dividend from the 2019 profit, which supports the capital ratios going forward and, second, we expect the bank to remain profitable over our forecast period, despite the elevated COR charges. Similarly, the CAR of 16.4% (2019) seems to put the bank on the safe side, especially as it has not paid the 2019 profit out to shareholders in dividends.

To remain conservative, we assume payout ratios of 50% in the first stage of our valuation model (2020-22E), even though we note that the bank has the capacity to pay more once there is more clarity on the medium-to-long-term effects of the pandemic, followed by a gradual increase to c.77%, which we calculate as the bank's sustainable payout ratio in the long term, assuming a ROE of 12.8% and a terminal growth rate of 3%. Thus, in our view, NLB Banka could pay MKD 763/share in 2021E from the 2020E profit, followed by a DPS of MKD 1,004 in 2022E.

NLB Banka ad Skopje: capital adequacy and dividends*

Source: WOOD Research, NLB Banka ad Skopje, Bloomberg; *as announced

These payout ratios support the capital base further, which we see reaching 17.2% in 2020E, 17.4% in 2021E and 17.6% in 2022E. These levels indicate that the bank could, eventually, pay out more than we assume, or that the bank has the capacity to grow its loan book faster than we have pencilled into our model. In any case, either of the two could, theoretically, generate upside to our estimates, should they materialise. This time around, however, we choose to remain conservative until there is more transparency on the COR levels, and the general development of the economy next year and in the future, especially in the context of the pandemic.

Important disclosures

This investment research is published by WOOD & Company Financial Services, a.s. ("WOOD&Co") and/or one of its branches who are authorised and regulated by the Czech National Bank (CNB) as Home State regulator and in Poland by the Polish Financial Supervision Authority (KNF), in Slovakia by the National Bank of Slovakia (NBS), in Italy by the Companies and Stock Exchange Commission (CONSOB) and in the UK by the Financial Conduct Authority (FCA) as Host State regulators.

This investment research was prepared by WOOD&Co with financial assistance from Taipei China through the TaiwanBusiness EBRD Technical Cooperation Fund managed by the European Bank for Reconstruction and Development ("EBRD"). Neither EBRD nor Taipei China has had any editorial rights or other influence on the content of this investment research. Neither EBRD nor Taipei China makes any representation or warranty or assumes any responsibility or liability in relation to the contents of this investment research or reliance thereon. The views expressed in this investment research are those of WOOD&Co and no no way be taken to reflect the official opinion of EBRD or of Taipei China. EBRD may, as of the date hereof or in the future, have an investment in, provide other advice or services to, or otherwise have a financial interest in, certain of the companies and parties contained or named in this investment research or in their affiliates.

This investment research was completed on 09/12/2020 at 19:00 CET and disseminated on 10/12/2020 at 07:30 CET.

WOOD&Co's rating and price target history for NLB Banka ad Skopje in the preceding 12-month period:

Date	Rating	Date	PT
10/12/2020	HOLD – initiation of coverage	10/12/2020	MKD 20,807

A history of all WOOD&Co's investment research disseminated during the preceeding 12-month period can be accessed via our website at https://research.wood.com.

The meanings of recommendations made in WOOD&Co's investment research are as follows:

BUY: The stock is expected to generate total returns of over 15% during the next 12 months as measured by the price target.

HOLD: The stock is expected to generate total returns of 0-15% during the next 12 months as measured by the price target.

SELL: The stock is expected to generate a negative total return during the next 12 months as measured by the price target.

RESTRICTED: Financial forecasts, and/or a rating and/or a price target is restricted from disclosure owing to Compliance or other regulatory/legal considerations such as a blackout period or a conflict of interest.

NOT RATED: Suspension of rating after 30 consecutive weekdays where the current price vis-à-vis the price target has been out of the range dictated by the current BUY/HOLD/SELL rating.

COVERAGE IN TRANSITION: Due to changes in the Research team, the disclosure of a stock's rating and/or price target and/or financial information are temporarily suspended.

As of the end of the last calendar quarter, the proportion of all WOOD&Co's investment research vis-à-vis the proportion of subject companies that were investment banking clients over the previous 12 months is as follows:

	BUY	HOLD	SELL	Restricted	NOT RATED	Coverage in transition
Equity Research Coverage	55%	37%	8%	1%	n.a.	1%
IB Clients	1%	1%	n.a.	1%	n.a.	n.a.

Any prices of financial instruments quoted in this investment research are taken as of the previous day's market close on the home market unless otherwise

Details of the methodologies used to determine WOOD&Co's price targets and risk assessment related to the achievement of the targets are outlined throughout the most recent substantive report/note on the subject company.

It should be assumed that the risks and valuation methodology presented in daily news or flash notes, and not changing WOOD&Co's estimates or ratings, are as set out in the most recent substantive research report/note on the subject company and can be found on our website at https://research.wood.com.

WOOD&Co's policy is to update investment research as it deems appropriate, based on developments in the subject company, sector or market that may have a material impact on the views or opinions stated in the investment research.

Description

- 1 The company currently is, or in the past 12 months was, a client of WOOD&Co or any of its affiliates for the provision of corporate finance/investment banking services.
- 2 In the past 12 months, WOOD&Co or any of its affiliates have received compensation for corporate finance/investment banking services from the company.
- 3 In the past 12 months, WOOD&Co or any of its affiliates have been lead manager or co-lead manager of a publicly disclosed offer of the company's financial instruments.
- 4 In the past 12 months, WOOD&Co or any of its affiliates have acted as broker to the company
- 5 WOOD&Co or any of its affiliates are market maker(s) or liquidity provider(s) in relation to financial instruments of the company.
- In the past 12 months, WOOD&Co or any of its affiliates have provided to the company any services set out in Sections A and B or Annex I to the Directive 2014/65/EU of the European Parliament and of the Council, other than services listed under points 1, 3, 4 or 5 above, or received compensation for such services from the company.
- The authoring analyst or any individual involved in the preparation of this investment research have purchased/received shares in the company prior to a public offering of those shares; and the price at which they were acquired along with the date of acquisition are disclosed above.
- 8 The authoring analyst or any individual involved in the preparation of this investment research has a direct ownership position in securities issued by the company.
- A partner, director, officer, employee or agent of WOOD&Co and its affiliates, or a member of his/her household, is an officer, or director, or serves as an advisor or board member of the company.
- WOOD&Co or its affiliates hold a net long or short position exceeding the threshold of 0,5% of the total issued share capital of the company, calculated in accordance with Artcle3 of Regulation (EU) No 236/2012 and with Chapters III and IV of Commission Delegated Regulation (EU) No 918/2012.
- The company owns more than 5% of the total issued share capital in WOOD&Co or any of its affiliates.

The authoring analysts who are responsible for the preparation of this investment research have received (or will receive) compensation based upon (among other factors) the overall profits of WOOD&Co, which includes corporate finance/investment banking, sales and trading and principal trading revenues. However, such authoring analysts have not received, and will not receive, compensation that is directly based upon or linked to one or more specific activities, or to recommendations contained in the investment research. One factor in equity research analyst compensation is arranging corporate access events/meetings between institutional clients and the management teams of covered companies (with the company management being more likely to participate when the analyst has a positive view of the company).

WOOD&Co and its affiliates may have a corporate finance/investment banking or other relationship with the company that is the subject of this investment research and may trade in any of the designated investments mentioned herein either for their own account or the accounts of their clients, in good faith or in the normal course of market making. Accordingly, WOOD&Co or their affiliates, principals or employees (other than the authoring analyst(s) who prepared this investment research) may at any time have a long or short position in any such designated investments, related designated investments or in options, futures or other derivative instruments based thereon.

WOOD&Co manages conflicts of interest arising as a result of preparation and publication of research through its use of internal databases, notifications by the relevant employees and Chinese Walls as monitored by Compliance. For further details, please see our website at https://www.wood.cz/mifid-information/.

The information contained in this investment research has been compiled by WOOD&Co from sources believed to be reliable, but (with the exception of the information about WOOD&Co) no representation or warranty, express or implied, is made by WOOD&Co, its affiliates or any other person as to its fairness, accuracy, completeness or correctness. WOOD&Co has not independently verified the facts, assumptions, and estimates contained herein. All estimates, opinions and other information contained in this investment research constitute WOOD&Co' judgement as of the date of this investment research, are subject to change without notice and are provided in good faith but without legal responsibility or liability.

WOOD&Co salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and our proprietary trading desk that reflect opinions that are contrary to the opinions expressed in this investment research. WOOD&Co's affiliates, proprietary trading desk and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this investment research.

This investment research is provided for information purposes only and does not constitute or form part of an offer or invitation or solicitation to engage in investment activity or to buy or sell any designated investments discussed herein in any jurisdiction. As a result, the designated investments discussed in this investment research may not be eligible for offer or sale in some jurisdictions. This investment research is not, and under no circumstances should be construed as, a solicitation to act as a securities broker or dealer in any jurisdiction by any person or company that is not legally permitted to carry on the business of a securities broker or dealer in that jurisdiction.

This investment research does not have regard to the investment objectives, financial situation or particular needs of any particular person. Investors should consider this report as only a single factor in making their investment decision and obtain advice based on their own individual circumstances before making an investment decision. To the fullest extent permitted by law, none of WOOD&Co, its affiliates or any other person accepts any liability whatsoever for any direct or consequential loss arising from or in connection with the use of this investment research.

For United Kingdom or EU Residents:

This investment research is for persons who are eligible counterparties or professional clients within the meaning of Directive 2014/65/EU of the European Parliament and of the Council of 15 May 2014 on markets in financial instruments and amending Directive 2002/92/EC and Directive 2011/61/EU and is exempt from the general restrictions in section 21 of the Financial Services and Markets Act 2000 (or any analogous legislation) on the communication of invitations or inducements to engage in investment activity on the grounds that it is being distributed in the United Kingdom only to persons of a kind described in Article 19(5) (Investment Professionals) and 49(2) (High Net Worth companies, unincorporated associations etc) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (as amended).

For United States Residents:

This investment research distributed in the United States by WOOD&Co, and in certain instances by Brasil Plural Securities LLC ("Brasil Plural"), a U.S. registered broker dealer, only to "major U.S. institutional investors", as defined under Rule 15a-6 promulgated under the U.S. Securities Exchange Act of 1934, as amended, and as interpreted by the staff of the U.S. Securities and Exchange Commission ("SEC"). This investment research is not intended for use by any person or entity that is not a major U.S. institutional investor. If you have received a copy of this research and are not a major U.S. institutional investor, you are instructed not to read, rely on or reproduce the contents hereof, and to destroy this research or return it to WOOD&Co or to Brasil Plural. Analyst(s) preparing this report are employees of WOOD&Co who are resident outside the United States and are not associated persons or employees of any U.S. registered broker-dealer. Therefore the analyst(s) are not be subject to Rule 2711 of the Financial Industry Regulatory Authority ("FINRA") or to Regulation AC adopted by SEC which, among other things, restrict communications with a subject company, public appearances and personal trading in securities by a research analyst. Any major U.S. Institutional investor wishing to effect transactions in any securities referred to herein or options thereon should do so by contacting a representative of Brasil Plural. Brasil Plural is a broker-dealer registered with the SEC and a member of FINRA and the Securities Investor Protection Corporation. Its address is 545 Madison Avenue, 8th Floor, New York, NY 10022 and its telephone number is 212-388-5613. WOOD&Co is not affiliated with Brasil Plural or any other U.S. registered broker-dealer.

The views and sentiments express securities and or issuers discussed	d herein.	 and a second sec
